

## NAVSUP Leverages Coginiti to Power Naval Logistics

### Overview

The U.S. Navy Supply Systems Command (NAVSUP) operates in one of the world's most complex logistics environments – moving critical goods, equipment, and parts to where they're needed, when they're needed, all while ensuring cost accountability and transparency.

Coginiti's secure data operations platform gives NAVSUP the visibility, control, and agility needed to keep supply lines mission-ready.

### NAVSUP Challenges

- Multiple Data Platforms: supply, finance, and operational data are spread across disparate systems
- Mission Critical Decision-Making: every delay or misallocation impacts mission readiness
- Cost Accountability: budget oversight requires precise, real-time visibility
- Security & Compliance: data must be managed in secure environments, meeting strict U.S. DoD standards

### Coginiti's Advantages

- One Door to Data: securely query and analyze data from any data source - without moving it - to see a trusted view of supply chain health
- Built-in Versioning & Governance: ensure data quality and accountability with full traceability of supply data, from raw source data to final transformation
- Deploy in DoD Environments: operates in environments compliant with IL2-IL6 classifications, ensuring data confidentiality and mission security
- Collaboration: Empower teams to work from a common platform, accelerating training, learning, and decision making.

### Mission Impacts

With Coginiti NAVSUP can:

- Pinpoint part availability
- Monitor shipping progress
- Identify cost overruns before impacting budgets
- Securely share supply data across command structures

### Why NAVSUP Chooses Coginiti

- Faster Insight-to-Action: prevent supply disruptions
- Reduced Operational Costs: consolidate data tooling costs
- Accelerate Productivity: self-service analytics for non-technical users
- DoD-grade Security Compliance: FIPS, encryption at rest and in transit, CAC integration, auditable
